Slidev note

Yue-Chu Cheng

Reference

- This repo refer to
    - gabriel-del/slidev
    - Slidev

Build Single Page Application on GitHub Pages server

- Local

  1. Create a slidev repo `yarn create slidev`, or you can copy the template from Single entry slidev, Multi-entry slidev.

  2. Check package.json, "dependencies":

```
"dependencies": {
"@slidev/cli": "^0.48.1",
"@slidev/theme-default": "latest",
"@slidev/theme-seriph": "latest",
"vue": "^3.4.21",
"playwright-chromium": "^1.21.1"
}
```

  3. Modified the "scripts" according to the repo name, e.g.

```
"build": "slidev build {.MD_FILE_PATH} -d --base /{REPO_NAME}/"
```

  4. Creat git action .yml file e.g. `REPO/.github/workflows/deploy.yml`

Build Single Page Application on GitHub Pages server

- On GitHub site

  1. Create a repo

  2. Open write and read permissions under `REPO>>Settings>>Action>>General>>Workflow permissions`

  3. Select the **gh-pages** branch to deploy, `REPO>>Settings>>Pages>>Build and deployment>>Branch`

  4. Publish the local repo to remote

  5. Wait for deploying the websit

  6. Finish!! Check your website under `https://yuechucheng.github.io/REPO/` or `https://yuechucheng.github.io/REPO/FOLDER` for multi-entry

- **Currently, the Slidev is not allow to create the website under *username.github.io*.**

Wait for deploying the websit
